

Special Chain Lubricant

## Special Chain Lubricant

The *Rohloff Special Chain Lubricant* has been developed in co-operation with a leading German manufacturer especially for the bicycle chain and the automatic chain lubrication system *Rohloff Lubmatic*.

It is based on a synthetic oil and special DCS-additives which guarantee:

- high resistance to pressure
- maximum lubrication capacity
- water-repulsion
- rust prevention

Furthermore, the *Rohloff Special Chain Lubricant* is biodegradable and totally harmless to water.

In order to test its ability of degradation, the lubricant is mixed with sewage plant germs and then one counts the percentage of lubricant which has been degraded after 21 days. Around 90% of the lubricant were degraded after this period of time and the rest only some days later.

The *Rohloff Special Chain Lubricant* comes in a 50ml plastic bottle which can be refilled. This additional feature is important in countries like Germany where the refilling of the bottle can be marketed successfully due to the environmental awareness of the consumers.
